

Investment Objective

Essex Global Life Sciences seeks capital appreciation by investing in both long and short positions of medical and life science companies. These companies are focused in the areas of drug discovery and distribution, the production of devices and instrumentation, delivery of health care services, and the development and implementation of medical information technology.

Risks of Essex Global Life Sciences: The **Essex Global Life Sciences** portfolio returns may show a high level of variability and volatility. In addition to market risk, additional risks in these portfolios may result from Essex's selection of specific securities, since individual holdings may represent a significant percentage of a portfolio's holdings from time to time. Performance Calculations: performance returns are of the **Essex Global Life Sciences Composite**, inception 04/01/1998. The Essex Global Life Sciences Composite includes all actual, fee-paying, fully discretionary accounts managed by Essex to seek capital appreciation by investing in a portfolio consisting primarily of equity securities of issuers in the Life Sciences area. Accounts in this composite may simultaneously have long and short equities. The use of derivatives may be utilized in the management of the accounts. The S&P 500 index is capitalization-weighted and quoted in USD. The volatility of the index may be materially different from the individual performance attained by a specific investor. In addition, the Composite's holdings may differ significantly from the securities that comprise the indices. The index has not been selected to represent an appropriate benchmark to compare the Composite's performance, but rather are disclosed to allow for comparison of an Composite's performance to that of certain well-known and widely recognized indices. An index is unmanaged, does not incur fees or expenses, and cannot be invested in directly.

Performance Calculation Methodology: Gross performance results presented are net of transaction costs, withholding taxes and direct expenses, but before management fees, custody fees and other indirect expenses. Composite returns include the reinvestment of income and class action proceeds, if applicable. Net performance returns will be reduced by investment advisory fees, administrative fees, and performance fees on net profits. Fees are generally collected quarterly or annually, which produces a compounding effect on the total rate of return net of management, administrative, and performance fees. As an example, the effect of investment advisory fees on the total value of a client's portfolio assuming \$1,000,000 portfolio return of 10% a year, a 1.0% annual investment advisory fee, a .09% annual administrative fee, and a 20% performance fee on net profits would be \$17,611 in the first year, with a cumulative effect of \$101,367 over five years. The five year compounded gross rate of return of 61.1% would be reduced to 40.2% after taking into account investment advisory fees, administrative fees and performance fees on net profits. The actual fee charged to an individual account may differ from the standard schedule depending on a number of factors including account type and size.

Past performance is not necessarily predictive of how an investors' individual account will perform. Wherever the potential for profit exists, there is also a potential for loss.

Investment Philosophy

Essex Global Life Sciences seeks to isolate the early signs of improving/deteriorating financial estimates and business conditions through a combination of fundamental research and overall industry expertise.

By discovering conditions of asymmetry between market expectations and proprietary models, Essex looks to construct a long/short portfolio between 40-60 positions while continuously monitoring and mitigating risk.

Investment Process

The objective:

- Determine the catalysts for positive earnings/revenue change
- Assess the sustainability of the change
- Develop internal earnings estimates
- Ascertain whether the anticipated growth is reflected in the current price of the stock

Catalysts give rise to improving/deteriorating situations. Typical catalysts include:

- Demographic change
- Increased utilization
- Support from private/public & R&D spending
- Continued growth in patent applications
- New products and innovations

Seek to build a high conviction portfolio of best ideas:

- Companies in different phases of growth and demonstrating diverse valuation characteristics

Employ a disciplined cover/sell system:

- Catalyst for improved growth has played out
- Price target reached
- Deterioration of company specific fundamentals
- Potentially better opportunities within sector

Performance Disclosures

The Essex Global Life Sciences representative account has been selected on the basis that its investment objective, historical performance record, and growth characteristics are consistent with those accounts in the Essex Global Life Sciences composite. The portfolio's trades are executed in accordance with all other accounts in the composite. The representative account is fully discretionary and has been in the Essex Global Life Sciences composite for at least three years.

Portfolio Risk Controls

- Constantly monitor portfolio gross/net exposures, beta, and value at risk.
- Before being added/subtracted to the portfolio, each name is checked against its impact on beta, net exposure, VaR, as well as sub-sector exposure.
- Sell/cover positions where the price target has been achieved with no further catalysts, core investment thesis is not playing out, or potentially better opportunities exist.
