

Investment Objective

Essex Growth Equity is an All-Cap strategy designed to provide investors with exposure to dynamic growth companies in a market capitalization range of \$100 million and up. The strategy is actively managed and utilizes the Russell 3000 Growth index as its performance benchmark. The strategy is a concentrated portfolio of 50-70 companies diversified across domestic industry sectors that show accelerating earnings and sustainable revenue growth.

Joe McNay
Chief Investment Officer

Prior to founding Essex in 1976, Joe was Executive Vice President and Director of Endowment Management & Research Corp. for nine years. Before 1967, Joe was Vice President and Senior Portfolio Manager at the Massachusetts Company. Currently he is serving as Trustee of National Public Radio, Trustee of the Dana Farber Cancer Institute, and is a Trustee and member of the Children’s Hospital Investment Committee. He received his A.B. degree from Yale University and his M.B.A. degree from the Wharton School of Finance

About Essex

Essex Investment Management, founded in 1976, has a singular focus as a boutique growth manager offering portfolio management services to both institutions and high net worth individuals. As of quarter end, Essex has 20 employees of whom 11 are investment professionals.

⁽¹⁾Top ten holdings and weightings for a typical Growth Equity portfolio

⁽²⁾Characteristics for a typical Growth Equity portfolio

Risks of equity portfolios: **Essex Growth Equity** portfolio returns may show a high level of variability and volatility. In addition to market risk, additional risks in these portfolios may result from Essex's selection of specific securities, since individual holdings may represent a significant percentage of a portfolio's holdings from time to time. Sources: portfolio characteristics, top ten holdings, and sector weights calculated internally by Essex. Performance Calculations: performance returns are of the **Essex Growth Equity Composite**, inception 1/1/79. Returns include reinvestment of dividends and other earnings. The Essex Growth Equity Composite includes all fully discretionary accounts managed by Essex to seek capital appreciation by investing in all-capitalization growth companies. The use of leveraging, short positions and derivatives has not been used by any of the accounts. The Russell 3000 Growth Index[®] contains those securities with a greater-than average growth orientation, and includes reinvestment of dividends. The Russell 3000 Growth Index[®] measures the performance of those companies with higher price-to-book ratios and higher forecasted growth values. The Russell 3000 Growth Index[®] is a trademark of Russell Investments. Russell Investments is the owner of the trademarks, service marks and copyrights related to its respective indexes. The volatility of the indices may be materially different from the individual performance attained by a specific investor. In addition, the Adviser's/Fund's holdings may differ significantly from the securities that comprise the indices. The indices have not been selected to represent an appropriate benchmark to compare an investor's performance, but rather are disclosed to allow for comparison of an investor's performance to that of certain well-known and widely recognized indices. An index is unmanaged, does not incur fees or expenses, and cannot be invested in directly. Composite returns include the reinvestment of dividends and are presented in USD. Gross performance results presented are net of transaction costs, withholding taxes and direct expenses, but before management fees, custody fees and other indirect expenses. Net performance results are presented net of the maximum applicable management fees, transaction costs, withholding taxes and direct expenses, but before custody fees and other indirect expenses. This composite does not incur any performance-based fees. Actual returns will be reduced by investment advisory fees and any other additional fees and expenses. Essex's standard fee schedule is available on request and can be found in Part 2A of our Form ADV. Investment advisory fees are generally collected quarterly, which produces a compounding effect on the total rate of return net of management fees. The actual fee charged to an individual account may differ from the standard schedule depending on a number of factors including account type and size. Past composite performance is not necessarily predictive of how an investor's individual account will perform. Wherever the potential for profit exists, there is also a potential for loss.

Essex Growth Equity Strategy

Investment Process

Focus on the All-Cap universe as defined by the Russell 3000 Growth Index to identify companies and industries that may be experiencing faster growth than in the past.

The objective:

- Determine the catalysts for positive earnings/revenue change
- Assess the sustainability of the change
- Develop internal earnings estimates
- Ascertain whether the anticipated growth is reflected in the current price of the stock

Catalysts give rise to improving situations. Typical catalysts include:

- Corporate restructuring
- Industry consolidation
- Improving industry
- Market share gains
- New products

Build a high conviction portfolio of best ideas.

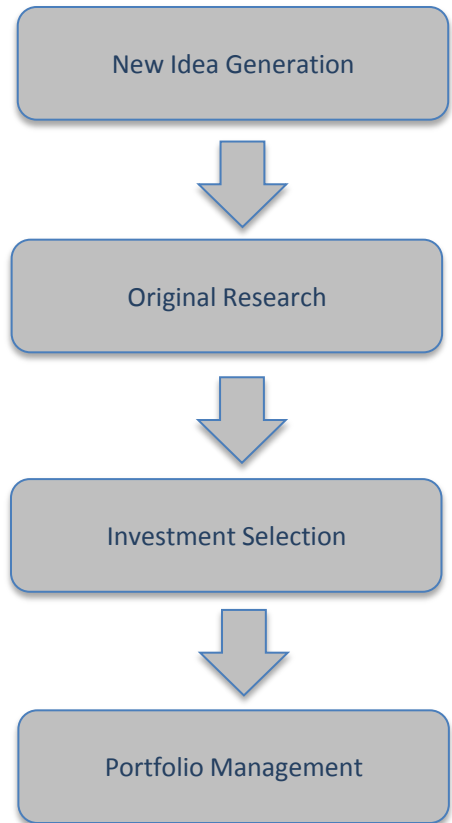

- Companies in different phases of growth and demonstrating diverse growth and valuation characteristics

Customize based on client risk/return preference:

- Aggressive Growth
- Growth and Income

Employ a disciplined sell system:

- Catalyst for improved growth has played out
- Price target reached
- Deterioration of company specific fundamentals
- Better opportunities within sector
