IMPORTANT DISCLOSURE

Risks of Essex Global Life Sciences: The **Essex Global Life Sciences** portfolio returns may show a high level of variability and volatility. In addition to market risk, additional risks in these portfolios may result from Essex's selection of specific securities, since individual holdings may represent a significant percentage of a portfolio's holdings from time to time.

Performance Calculations: performance returns are of the **Essex Global Life Sciences**

Composite, inception 04/01/1998. The Essex Global Life Sciences Composite includes all actual, fee-paying, fully discretionary accounts managed by Essex to seek capital appreciation by investing in a portfolio consisting primarily of equity securities of issuers in the Life Sciences area. Accounts in this composite may simultaneously have long and short equities. The use of derivatives may be utilized in the management of the accounts. The S&P 500 index is capitalization-weighted and quoted in USD. The volatility of the index may be materially different from the individual performance attained by a specific investor. In addition, the Composite's holdings may differ significantly from the securities that comprise the indices. The index has not been selected to represent an appropriate benchmark to compare the Composite's performance, but rather are disclosed to allow for comparison of an Composite's performance to that of certain well-known and widely recognized indices. An index is unmanaged, does not incur fees or expenses, and cannot be invested in directly.

Performance Calculation Methodology: Gross performance results presented are net of transaction costs, withholding taxes and direct expenses, but before management fees, custody fees and other indirect expenses. Composite returns include the reinvestment of income and class action proceeds, if applicable. Net performance returns will be reduced by investment advisory fees, administrative fees, and performance fees on net profits. Fees are generally collected quarterly or annually, which produces a compounding effect on the total rate of return net of management, administrative, and performance fees. As an example, the effect of investment advisory fees on the total value of a client's portfolio assuming \$1,000,000 portfolio return of 10% a year, a 1.0% annual investment advisory fee, a .09% annual administrative fee, and a 20% performance fee on net profits would be \$17,611 in the first year, with a cumulative effect of \$101,367 over five years. The five year compounded gross rate of return of 61.1% would be reduced to 40.2% after taking into account investment advisory fees, administrative fees and performance fees on net profits. The actual fee charged to an individual account may differ from the standard schedule depending on a number of factors including account type and size.

Past performance is not necessarily predictive of how an investors' individual account will perform. Wherever the potential for profit exists, there is also a potential for loss.

Essex Global Life Sciences Strategy

The Case for Health Care

Several exploitable inefficiencies in the Healthcare Sector provide opportunities for the Essex Global Life Sciences Strategy.

Investment Philosophy

We believe that significant outperformance can be found by aiming to recognize growth early in a company's life cycle. By identifying companies in three different groups (early Dynamic Growth, event-driven Development Stage and steady business model Sustainable Growth) the Essex Global Life Sciences strategy can build a high conviction long/short portfolio that provides opportunities for superior investment returns.

Investment Process

- Idea Generation: Screen for stocks exhibiting signs of improving/deteriorating financial performance based on change in earnings growth rate; screen for catalysts using events calendar for development stage companies
- Research: Identify and analyze catalysts and reasons for improving fundamentals
- Portfolio Construction: 50-80 holdings with \$100m minimum market cap
- Sell/Cover Discipline: Reach target price, change in fundamentals or more compelling idea

Risk Management

- Manage exposure: -10% to 70% net exposure, 125% gross exposure
- Monitor and maintain desired exposure levels
- Option strategies
